**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election of species in the reply filed on 5/30/2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claims include the terms "lithium hexahydridoborane or lithium hexahydridoalane". These chemicals are not described in the specification sufficiently to show that Applicant had possession at the time of invention. No chemical formulas or mechanisms have been disclosed.
4. Claims 1-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Art Unit: 1755

The claims include the terms "lithium hexahydridoborane or lithium hexahydridoalane".

One of ordinary skill in the art would not be able to determine what compositions would meet this limitation without undue experimentation. No chemical formulas or mechanisms have been disclosed. There is also no evidence that these chemical exist in any scientific or journal references.

***Claim Rejections - 35 USC § 102/103***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-8 (as best can be understood) are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Schumacher et al (US 5714711).

Schumacher discloses the use of lithium, aluminum, boron hydrides encapsulated in a solid propellant with ammonium perchlorate, and polystyrene (col. 3 and 4).

Alternatively, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the various lithium, aluminum, boron hydrides in

combination since Schumacher suggests that alloys of these are useful as the high-energy fuel.
